# ECOSOIL

SAVE YOUR SOIL • SECURE YOUR LIVELIHOOD  
SORG VIR JOU GROND EN JOU GROND SORG VIR JOU

Ecosoil's mission is to provide products and services to farmers, which will enable them to raise profits in a sustainable and environmentally friendly manner by decreasing their dependance on fertilisers and pesticides, as well as increasing production volume and quality.

Our **value system**: Honesty, Integrity, Passion

### **An Outstanding antidote to the effects of global warming and economic instability.**

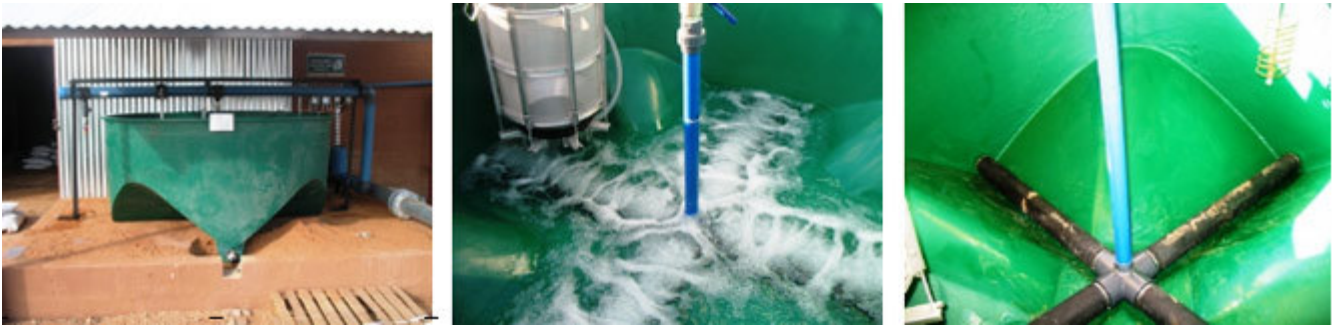

Abnormal increases in input costs over the last while has caught most farmers off guard. Farmers that still use conventional fertilisation and pest control practices have experienced the worst of these effects, in comparison to biological farmers that have already decreased their dependance on fertiliser and pesticides. Global warming and instability of the global markets present further challenges for the farmer. During a recent study undertaken by James Blignaut it was found that for the country as a whole every 1% decrease of rainfall will probably result in a decrease of 1.1% of maize crops and a 0.5% decrease of wheat crops. The best way to shield yourself against these challenges is to improve the water retention capabilities and the fertility of your soil and that is what we can help you do.

### **A Cheap and fast way to improve soil fertility.**

Soil fertility and health is increased via the inoculation of favourable micro-organisms, the addition and degrading of organic material and the chemical balancing of soils. Compost tea is the cheapest and fastest way to improve soil fertility. In most cases the costs of the product is less than the savings with regards to fertilisers alone [Read more about our compost tea and why you need it.](#) Within one season you will observe improved growth, improved production (in the case of annuals) as well as improved soil fertility. During trials of dry wheat farming we achieved a 14% increase of production and a 0.5% increase of protein content. Please feel free to read some of our client feedback on our [website](#).

### **Ecosoil's new 2500L and 5000L systems.**

Our new tanks are designed in a manner which rules out all dead areas where anaerobic organisms can breed. Furthermore it is also extremely suitable for the mixing of compost and can also be use for water purification. For more information with regards to our tanks please visit our [website](#).

**Advanced biological farming and profitable dairy cultivation courses with Gary Zimmer.**

Gary is an American farmer with a lot of experience of biological farming. Do not let the opportunity to learn from this outstanding orator pass you by. SA Biofarm is presenting these two courses at four different locations between 24 August and 4 September. To qualify for R150 discount for group bookings we present you with the opportunity to register through us at Ecosoil. For more details please visit [www.sabiofarm.co.za](http://www.sabiofarm.co.za). Complete the application and fax to our office (021 848 9783) and we shall take care of registration on your behalf.

**Nationwide marketers required.**

We would appreciate it greatly if you could put us in contact with persons or institutions that could market our products in your neighbourhood.
